The Magni-Glass

The Moderne Magnifier

Two New Magnifiers of Ultra Smartness

WALTER Dorwin Teague designed these two new additions to the B & L line of magnifiers and readers—the Magni-Glass, a de luxe model of a reading glass, and the Moderne Magnifier, a sliding pocket glass.

Mr. Teague's work as an artist, stylist and designer has placed him among the foremost creators of things beautiful. His artistic skill has produced these two models of ultra smartness of design and color, and each has distinct charm.

Both magnifiers are made of colorful Lumarith—an exclusive composition material being used extensively in the manufacture of some of the finest merchandise.

The Magni-Glass offers to discriminating persons a reading glass of superior quality

and style. Octagonal in shape, with a wide field lens four and one-half inches in width, its length is eleven and one-quarter inches over all.

Not only will it find a place on the library table, but any woman will be proud to have it on her dressing table as an adjunct to her toilet accessories.

The Magni-Glass is available in a choice of four delightful colors—Beige, Old Rose, Pale Green and Dark Blue.

The Moderne Magnifier combines beauty and usefulness in a pocket size instrument to an unusual degree. It is equally appropriate for feminine or masculine tastes and is easily carried in purse or vest pocket.

The magnifying lens is of superior optical quality made of Bausch & Lomb oph-

thalmic glass—an assurance of perfection. It slides into its attractive case where it is adequately protected at all times.

The Moderne is made of Lumarith and is offered in a choice of four rich, handsome colors—Black, Dark Blue, Water Green and Red.
